

Chapter 1: Foundations

This chapter introduces the foundational ideas the rest of the book builds on, in plain deterministic fixture prose.

Foundations continue with more ordinary body text on this page, long enough to read as genuine prose rather than a heading or a table of contents entry of any kind.

More foundations body text lives on this page before the large pull-quote below, which must NOT be detected as a heading despite its size, because it ends in a period.

Deterministic fixtures make regressions visible.

Foundations closes out here with one more ordinary paragraph of body text before chapter 2 begins on the next page.

Chapter 2: Structures

A deliberately short chapter.

Chapter 3: Applications

Applications begins immediately, sharing this same page with the end of chapter 2 directly above it.

Applications continues here with plain body text, long enough to read as genuine prose rather than a heading candidate of any kind.

More applications body text on this page, still well under the font-size threshold that would make it look like a heading.

Applications closes out here with one final ordinary paragraph before chapter 4 begins on the next page.

Chapter 4: Practice

The final chapter walks through worked practice problems using plain deterministic prose, same as every chapter.

Practice continues here with more ordinary body text,
long enough to read as genuine prose for this fixture.

Still more practice body text on this page before the
fixture reaches its final closing page.

Practice closes out the fixture here with one last ordinary paragraph of deterministic body text.
